

A glowing pink lotus-shaped lamp is the central focus, emitting a soft pink light. The background is dark, showing a city skyline at night with some lights and a large, dark, abstract shape in the upper left corner.

Environmental and social sustainability

- recycling and reusing all production rest materials
- working with natural and degradable materials
- no children labour and 100% compliance with EU regulations

Advanced LED technology

- fire safety and energy efficiency
- most eco-friendly and cleanest method of illumination
- long lasting product quality (over 25.0000 working hours for the LED)

Instruction manual

1) Content

1x flameless real-wax-candle
2x 1,5V R6 AA-batteries
1x instruction manual

2) Description

The Eluvian flameless real-wax candle is a premium handmade wax candle with flickering flame simulation. Unlike a flaming candle the flameless real wax candle doesn't soot and smoke and especially doesn't bring any fire hazard.

Note: For the production of the candle wax reliefs were placed on the body of the real wax by hand. Thus irregularity of the surface and its application could occur, which do not affect the product quality and make the candle to a unique piece of art.

3) Turn on the candle

There is a batteries compartment lid with a comfort pushbutton on the bottom of the candle. Under it there are already the batteries and a Pull-tape. A single pull of the Pull-tape allows the contact of the batteries with the candle. Press once the pushbutton to turn on the candle. The colour change starts. If you want to retain a colour, press again briefly the comfort pushbutton. To resume the colour change simply push back briefly the comfort pushbutton. To turn off the candle, keep the pushbutton pressed until the candle switches off by itself.

Built-in Timer: If turned on, the candle illuminates 6 hours and cuts out automatically to have a resetting 18 hours later. In this way, the capacity of the batteries is maintained as long as possible.

Example: You set the controller on Timer at 6pm, the candle illuminates from 6pm to 12pm and then cuts out automatically. The other day at 6pm it powers up automatically.

This rhythm repeats until the batteries are dead or you switch off the modus manually.

Instruction manual

4) Replace the batteries

If you notice that after some time the luminosity of the candle dims, the batteries are weak. To replace them, remove the batteries lid on the bottom of the candle. Remove the used batteries and dispose of them according to the local regulations of your authority. Insert 2 new AA 1,5V batteries and make sure to install them correctly (polarity +/-). Close the batteries compartment.

5) Safety indication

Preliminary note: No liability will be assumed for consequential damage, which is due to the disregard of this instruction manual, the disregard of the safety instructions and the improper handling of the flameless candle.

The flameless candle is suitable for the use in dry areas.

This is a flameless candles. Never light it.

The flameless candle is not waterproofed. Do not dip it under water.

The flameless candle is hazard-free decoration accessory but not a toy for children and animals.

The wax layer is very sensitive to external influences such as heat (fireplace, electric hobs etc), crushes or pressure. Those should be avoided otherwise the surface of the candle can be damages or altered. Direct sunlight should also be avoided.

Check the status of the batteries. The flameless candle could be damaged by leaked or defective batteries. The batteries should be removed from the batteries compartment when the flameless candle is not used over a long period.

The flameless candle can not be opened or modified.

Instruction manual

6) Care instructions

Please clean the candle regularly with a dry duster. Do not use any solutions for cleaning.

7) Disposal Note

Old appliances and packaging material don't belong to a household garbage. You have to deliver them to a recycling disposal. Old batteries must not be disposed with the household garbage, but to a gathering place for old appliances and old batteries.

8) Troubleshooting

The flameless read-wax candle doesn't give light after being switched on.

- Check if the batteries are inserted correctly (polarity +/-) (see point 4).

The flameless real-wax candle light is becoming weaker.

- The battery power has become lower and the batteries should be replaced.
- The batteries shouldn't be weak? The batteries may have been inserted in the candles well before the candle is being used. Even without giving light the candle consumes energy in a standby mode.

9) CE conformity declaration

We, Eluvian, Untermenzinger Str. 68, D-80997 Munich, Tel.: +49 (0)176 231 83327, E-Mail: info@eluvian.de, declare hereby that this product complies with the essential requirements and other relevant provisions of the Directive 2006/95 EC.
